

FLOMAX™

HARP SCREENS ANOTHER QUALITY **AEG** PRODUCT

FloMax™ - Poly

Advanced Engineering Group's piano/harp screen with polyurethane stringers. We can manufacture the poly stringers to suit any machine set-up. We can supply almost any specification from our standard piano wire screen list, within the following limits:

- Apertures between 1.5mm – 46.0mm
- Wire thickness between 1.2mm – 8.0mm
- Max length – 1800mm (along the hook)
- Max width – Unlimited O/H (over hooks)

The benefits of using polyurethane over plastic or steel spacers is it can withstand more impact and the wear life around the stringer/spacer area is 2-3 times greater. We can also offer wire diameters greater than standard harps, up to 8.0mm diameter.
